🌟 AI Solutions Engineer with a multidisciplinary background in Language Technology, Computer & Data Science, and Business Analysis 🌟

PROFESSIONAL EXPERIENCE

AI Solutions Engineer

Architecting production-grade generative AI frameworks and agentic pipelines for RAG systems.

Building scalable ETL workflows and evaluation pipelines to optimize performance across banking, telecommunications, and infrastructure domains.

Utilizing LangGraph, LangSmith, and Prompt Flow for model monitoring and data-driven observability in complex enterprise environments.

Data Intelligence and AI Technology

Oct 2024 – Present

IT Business Analyst

Translating enterprise business needs into technical blueprints using BDD/Gherkin methodologies. Managed project lifecycles and

User Acceptance Testing (UAT) for mission-critical software solutions across international telecommunications, insurance, and tobacco industry clients.

Software & Product Development

Dec 2022 – Sep 2024

Researcher

Evaluated international digital accessibility compliance for academic software infrastructure.

Authored comprehensive technical audit reports providing actionable recommendations for inclusive university digital resource deployment.

Academic Research (NKUA)

Oct 2021 – Feb 2022

Data Scientist / Research Intern

Developed Music Information Retrieval (MIR) algorithms and optimized Deep Learning models for scientific research. Engineered ETL workflows to process and analyze complex musical data, contributing to peer-reviewed domain publications.

Athena Research Center

Jul 2019 – Jan 2021

TECHNICAL STACK & SKILLS

Core Expertise

🔗 AGENTIC AI & WORKFLOWS

Design and development of autonomous agent execution loops, tool calling interfaces, and complex multi-agent system states.

🔗 RAG ARCHITECTURE

Production-grade vector database retrieval, advanced query rewriting, reranking pipelines, and context-stuffed context window injection.

🔗 LLM EVALUATION FRAMEWORKS

Rigorous system profiling using model-based evaluation, custom evaluation testbeds, and validation benchmark sets.

🔗 ETL WORKFLOW ARCHITECTURE

Engineering scalable parsing and ingestion data pipelines transforming raw enterprise documents into structured intelligence streams.

🔗 REQUIREMENTS ANALYSIS (BDD)

Bridging software constraints into executable specifications using Behavior-Driven Development paradigms and Gherkin systems.

Tools & Frameworks

⚙️ LangChain

🐍 Python

☁️ Azure AI Services

git Git & Version Control

📄 Gherkin / Cucumber

Languages

●●● English (C2 Professional)

●●● Greek (Native)

●○○ French (B1 Intermediate)

Soft Skills

🧠 Critical Thinker

🔧 Problem Solver

👥 Team Player

🔄 Adaptable & Curious

Beyond the Screen

🎵 Choral Singing (Soprano)

📖 Psychology Literature

📷 Photography

EDUCATION

M.Sc. in Language Technology

Advanced specialization focusing on Natural Language Processing (NLP), Large Language Model pipelines, and computational speech architecture tools.

National & Kapodistrian University of Athens 
In Progress 

B.Sc. in Informatics & Telecommunications

Focus on core computer science foundations, algorithms, system data structures, and intelligent human-computer interaction models.

National & Kapodistrian University of Athens 
Completed 

Classical Piano Degree

Advanced training in music theory, structured execution logic, precision control, and creative performance interpretation.

National Conservatory / Music Institution 
Completed 

SELECTED PROJECTS & RESEARCH

iJazzARTIST: Intelligent Jazz Accompanist

Developed a real-time human-computer interactive music improvisation system utilizing automated parsing models and neural networks for real-time jazz piano accompaniment composition.

github.com/theatina/iJazzARTIST 

CryptoRecommendation System

Engineered a custom recommendation framework tracking sentiment analytics from cryptocurrency Twitter text streams, validated using rigorous 10-Fold Cross Validation models.

github.com/theatina/CryptoRecommendation 

DistilBERT Question-Answering Model

Fine-tuned a custom distilBERT Q&A infrastructure optimized using the SQuAD 1.1 dataset benchmark for contextual validation models.

github.com/theatina/distilBERT_QnA 

Aspect-Based Sentiment Analysis (ABSA)

Built text analysis pipelines designed to capture deep sentiment indicators and map structured entity relationships from natural language data streams.

github.com/theatina/ABSA
